

BioSolve *Connect*: Empowering Global Collaboration of BioSolve *Process*

BioSolve *Connect* is networked data storage application with a modern web-based user interface to allow your global BioSolve Process users to view and share datasets and process models in a collaborative and secure manner.

Centralized, SQL-based data repository

Share datasets, unit ops, and process models

Web-based UI for clearer communication

Ideal for companies with:

>4 users >2 geographic sites

CONSISTENCY

- Central resource management of unit ops, process parameters, and cost information
- Everyone globally shares the same data

ACCESSIBILITY

- Resides on your server for full access control
- User roles and permissions can be assigned

TRACEABILITY

- See who added data and when
- Decide which users have access to which data

COMMUNICATION

- Collaborate with your organization's process modellers around the world
- Share input data with management

How it Works

Model the Bioprocess Operation at Scale In Silico

- Optimize process + facility at scale
- Evaluate technology + process options
- Evaluate supply chain
- Share data, knowledge, decisions

Store and Share

Connect

Leverage and Build

Knowledge

• Reach all global users

• Integrate BioSolve *Process*

Access via web browser

Collaborate, share, and control access

Both reference costs and site-specific costs

EQUIPMENT

Both reference equipment and site-specific equipment

PROCESS & UNIT OPERATIONS

For reference, modelling studies, and collaboration

Enhance User Interface For All Stakeholders

Both your process modelling experts and senior management benefit from the clean, web-based experience

Access data inputs from any web browser

Clear data visualization for expert users

Intuitive interface for management users

Who Should Use BioSolve Connect?

Mid-and large-sized biopharmaceutical manufacturers, CDMOs, and suppliers with:

Global Process Modelling Teams

Global Manufacturing Science Teams

Additional features coming soon, including *Visualizer*
